

AGENDA

JUNE 7 - 11:00AM CT

NORTH AMERICA (CT)

11:00 AM

Software Supply Chain Security Leadership

Software supply chain and cybersecurity attacks are on the rise. When hackers exploit a vulnerability or attack the supply chain, the impact to business operations is felt throughout the ecosystem, resulting in financial loss, declining consumer confidence, and reputation damage. Examining your software supply chain security shouldn't be an afterthought and it should start at the top. Application security should be a high-level priority throughout the software development lifecycle—if you're creating software—and a significant step in the software acquisition process for all organizations. Detecting and stopping threats as soon as possible—before creating complete havoc—is a strategic operation many companies may be neglecting. As leaders, what steps should you be taking?

Speakers:

Christine Gadsby, VP, Product Security, Blackberry

Conal Gallagher, CIO & CISO, Flexera

Walter Haydock, Founder & CEO, StackAware

Joel Ratnasothy, Chief Executive Officer, Interneuron

Nicole Segerer, SVP & General Manager, Revenera

Dave McLoughlin, Senior Manager of Solution Engineering, Revenera (Moderator)

11:45 AM

The Digital Landscape, SBOMs, Security and More

Everything is software driven, and there's a convergence with AI and machine learning. What do ChatGPT, Github Copilot, and other technologies mean to the open source community? Product security and engineering teams now need to provide an accurate and complete SBOM, detailed output from their security testing tools, assurances about their software supply chain and SDLC security, and detailed reports about the provenance of all the components in their software. Companies need to move beyond the status quo to a robust security plan—or fall behind. Let's dive into what all this means to security, legal, and development teams.

Speakers:

Chris Wood, Technical Fellow, Lockheed Martin

David Cuka, FOSS Program Manager, Bank of America

Lynn Westfall, Software Supply Chain Expert, Consultant

Leon Schwartz, Principal, GTC Law

Alex Rybak, Sr. Director of Product Management, Revenera

Kendra Morton, Principal, Product Marketing Programs, Revenera (Moderator)

12:30 PM

Tech Speak: Technical Competence for Security and License Compliance

Most companies are adding open source software to their applications—or they're utilizing enterprise software containing third-party components. Hopefully just as many organizations are recreating software supply chain strategies. Regardless, it impacts the process security and software development teams own in order to maintain and ship risk-free applications. This panel will take on SDLC topics important for maintaining a high level of security and open source license compliance.

Speakers:

Matt Conway, Chief Technology Officer, Interneuron

Dr Hartmut Pohl, CEO, softScheck GmbH

Jiju Jacob, Director Engineering, Revenera

Neeraj Thakur, Staff Product Security Engineer, Revenera

Martin Callinan, Director, Source Code Control (Moderator)
