

AdminStudio 2018

Simplify Application Management

Benefits to Your Organization:

- One process for planning and delivery of physical, virtual, and mobile applications
- Reduces operational risk of compatibility issues with applications by resolving problems that can cause applications not to work as expected
- Greater visibility into potential security risks

Application risk

Application risk is part of every IT organization – big or small. Proactive risk assessment is critical to avoiding employee downtime, potential cyberattacks, and inefficiencies. Without it:

- Releasing new applications quickly becomes a barrier to making their risk posture as effective as possible
- Application delivery for physical, virtual and mobile deployments are all effected
- The situation gets worse as application deployment grows

Proactive application readiness

AdminStudio 2018 provides ongoing application evolution after launch to help you make the right decisions as new applications begin their lifecycle to the application portfolio. AdminStudio 2018 is the industry's only automated application compatibility testing, fixing and packaging solution for MSI, virtual, and mobile formats that integrates with existing systems management and mobile device technologies.

AdminStudio 2018 enables you to unify application management using one tool, with one process, regardless of deployment format. As a result, you will reduce application sprawl, and accelerate the adoption of virtualization,

cloud computing, mobile apps, Mac applications, and the next Windows OS update, and you'll position IT to maintain Application Readiness in an environment of rapid and continual change.

Identify software vulnerabilities with App Risk Module

App Risk Module for AdminStudio scans, identifies and prioritizes software vulnerabilities within your application portfolio. Add App Risk Module to your AdminStudio implementation to:

- **Make vulnerability assessment** part of the application readiness process
- **Automatically scan against** Flexera's list of more than 20,000 application titles
- **Prioritize critical vulnerabilities** across all applications – remediate the right things

This report shows the Vulnerability Status of the Applications. Clicking on a specific Status, will show the list of Applications and Advisories for that Status.

Application or Group	Supportability Risks							Security Risks
	Operating System Compatibility	Browser Compatibility	Application Virtualization Compatibility	Remote Application Publishing Compatibility	Best Practices	Risk Assessment	Application Conflicts	
7-Zip 9.20 (x64 edition)	⊗	—	⊗	⊗	⊗	✓	✓	⊗

Reliable application packaging & deployment

Fix and package applications for predictable deployment

- Automate packaging tasks with PowerShell APIs
- Advanced MSI packaging, customization, and authoring with InstallShield
- Distribute applications to the leading software deployment tools

Maintain mobile application readiness

Addresses mobile application Security and reliability concerns

- Identify risky applications and establish BYOD and blacklist policies
- Validate that applications follow best practices and enterprise policies
- Automate OS compatibility testing for error free deployment

Simplify Mac application management

Bringing Mac OS into the enterprise

- Standardize on compatibility, best practices and risk assessment
- Quickly edit MAC Application Installers
- Deliver MAC applications to JAMF Suite

Simplify application compatibility & migration

Eliminate your fear of the unknown

- Make life easier for users by fixing incompatibilities before you roll out applications
- Migrate to Windows 10 with confidence by ensuring all your apps will play well together after migration
- Assess the impact of Java dependency within your application portfolio

Accelerate application virtualization

Plays well with all popular application formats

- Quickly identifies which applications are not a candidate for virtualization. Reports on fixes required to convert
- Direct editing of application virtualization packages
- Automatically virtualize applications into the format of your choice

About Flexera

Flexera is reimagining the way software is bought, sold, managed and secured. We view the software industry as a supply chain, and make the business of buying and supplying software and technology asset data more profitable, secure, and effective. Visit us at www.flexera.com
