

Your Fast Track to Profit in the Windows Store

*Bringing Desktop Apps to the Universal Windows Platform
Using Microsoft's Desktop Bridge and Flexera's InstallShield®*

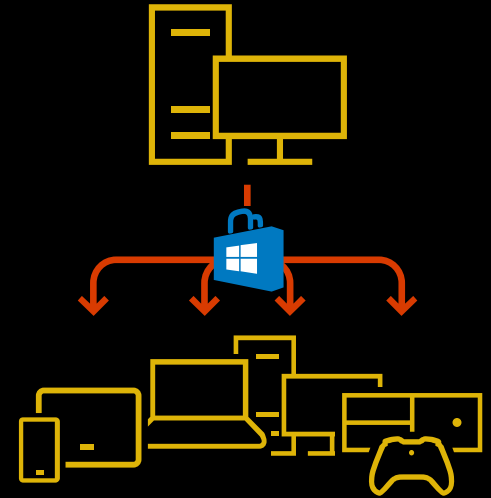

- User experience with desktop apps starts with installation. A worry-free installer and easy updates are top of mind for customers.
- App vendors need a modern installer, a trustworthy distribution method and opportunities to make money from their software.
- Microsoft's Universal Windows Platform and Windows Store provide a way forward.
- **This eBook explores how Microsoft's Desktop Bridge and Flexera's InstallShield can get you there.**

What is the Desktop Bridge?

A set of technologies that enables you to convert your Windows desktop application to the Universal Windows Platform (UWP) for Windows 10.

Benefits include:

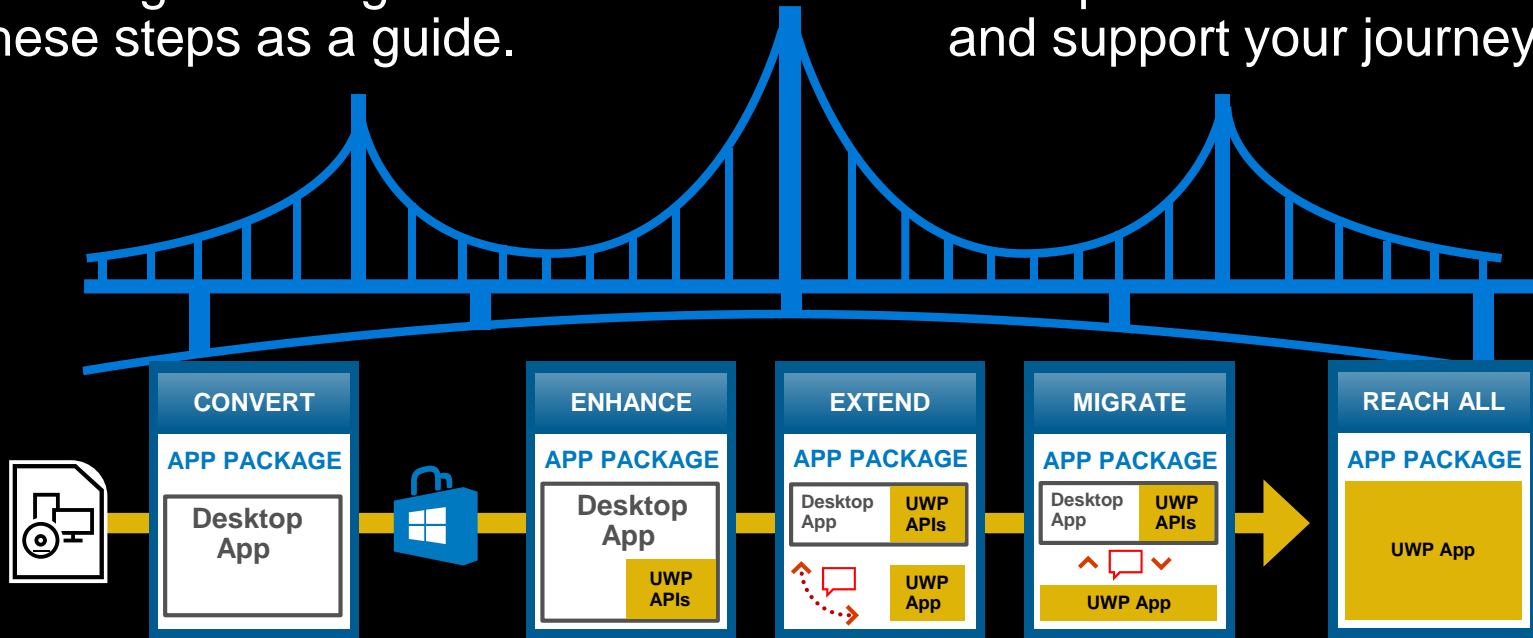

- **SIMPLIFIED AND TRUSTED DEPLOYMENT**
Clean and simple install/uninstall.
Updates delivered using differential packages.
- **ACCESS TO MODERN FEATURE SET**
Add XAML UI, UWP capabilities (Live Tiles, push notifications, IAP).
Move away from monolithic solutions and migrate at your own pace.
- **GREATER REACH, EASIER MONETIZATION**
Windows Store reaches 400+ million users today.
Monetize using local payment methods.

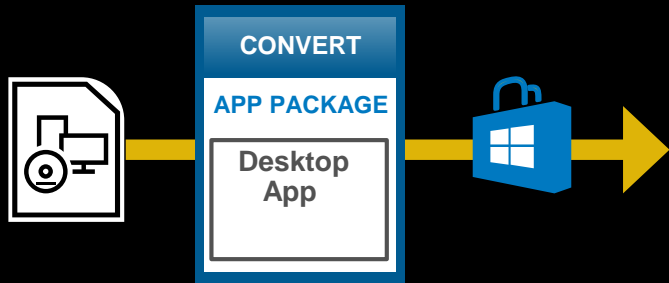

How Does It Work?

There are several steps to crossing the bridge. Follow these steps as a guide.

Microsoft and Flexera have partnered to enable and support your journey.

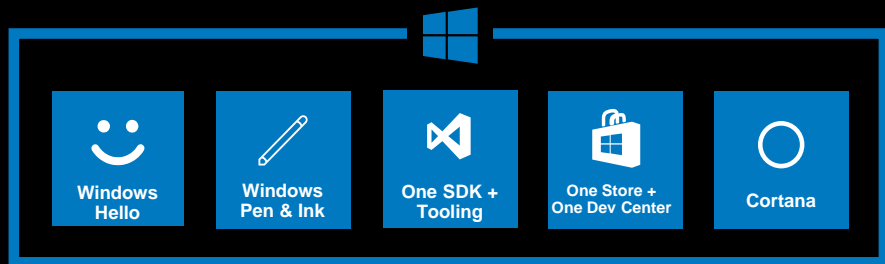

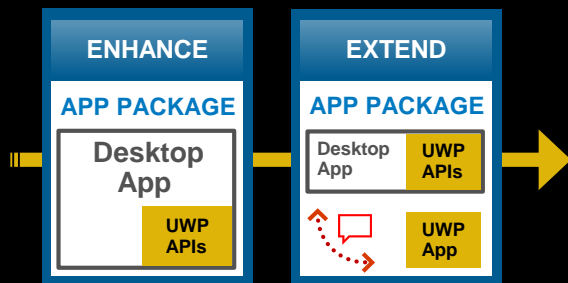

STEP 1: Test and convert your app binaries using InstallShield.

- **TEST YOUR APP FOR COMPATIBILITY**
Run validation tests on project file makeup, configuration. Perform any engineering work based on test results.
- **CREATE APP PACKAGES**
UWP app packages for Windows 10. Option to generate MSIs for older Win7 and Win8 platforms. Single project for easy maintenance.
- **FLATTEN MULTIPLE PACKAGES**
Merge many UWP app packages into one for Windows Store. Assign framework dependencies for completeness.

STEP 2:

Enhance and extend your application to increase engagement.

- **LIGHT IT UP**

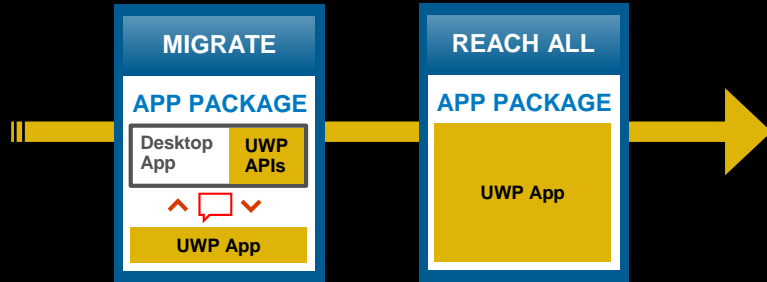

Enhance your converted desktop app with a wide range of UWP APIs. Add features like Live Tiles, push notifications, and more.

- **GO BEYOND**

Extend your application capabilities with features available only to converted apps. Launch a process when user logs on, integrate with File Explorer, include modern touch interface, and more.

STEP 3:

Migrate, gradually moving your older code to UWP to reach a wider audience.

- **USE THE BRIDGE**
Move away from monolithic solutions. Smooth transition between original desktop app and full UWP app package with code migration. Retain ability to run and publish app on Windows Desktop.
- **PUSH BOUNDARIES**
Once you're fully migrated to UWP (no WPF/Win32 components), you can reach all Windows device types.

STEP 4:

Distribute your converted app to the Windows Store or use sideloading.

- **PUBLISH TO WINDOWS STORE**
Global distribution to millions of customers. Differential auto-updates, analytics. Contact Microsoft at <http://aka.ms/DBStore>.
- **SIDELOAD WITH FLEXERA**
Not ready for Windows Store? Distribute your converted app in a familiar way. Use InstallShield to create sideloading bundle. Download child packages for Win10, Win7, Win8 on demand.
